

Storage Facility Creator (SFC) — User Manual

This guide describes how to use **Storage Facility Creator (SFC)** from the perspective of a **facility operator or staff member** using the main web/desktop app. It is based on the application’s navigation, screens, and routes as implemented in the codebase.

1. What SFC is for

SFC is operations software for **self-storage businesses**: multiple facilities, tenants, units, rent and fees, contracts, messaging, access codes, delinquency workflows, reporting, optional insurance and retail (POS), and integrations such as Stripe and accounting tools.

2. Getting access

Sign up and sign in

- Open the app URL you were given (on the production web host, you typically land on **Login**).
- **Sign up** creates a Firebase-authenticated account; you may be asked to **verify your email** before continuing.
- **Login** uses your email and password. **Forgot password** is available on the login flow.
- **Two-factor authentication (2FA)** can be turned on or off under **Settings** (see Section 8). When enabled, sign-in requires the second factor.

Invitations and approval

- **Accept invite** links let you join an existing team with a controlled role.
- Some accounts may see **Pending approval** until an administrator activates them.

Who this manual does *not* deep-cover

- **Super Admin** (/super-admin) is for platform operators, not day-to-day facility staff.
 - **End renters** often use **public links** (pay, sign lease, tenant portal) without signing into SFC; those flows are summarized in Section 11.
-

3. How the workspace is organized

Left sidebar (OPS)

After you sign in, most work happens under the **OPS** section:

Item	Purpose
Dashboard	Home: metrics, activity, shortcuts, and global search.
Facilities	List and manage facilities; create new facilities via the wizard.
Tenants	Tenant (customer) list, detail, add/edit, CSV import.
Messaging	Employee chat, bulk messaging, email, SMS, message history (facility-scoped).
Payments	Payment records and workflows tied to the business.
Retail	Point of sale and inventory (opens with facility selection if needed).
Delinquency	Late accounts: overview, past due, reminders, DNR (Do Not Rent).

Billing	Invoices list for the selected facility (create, filter, open invoice detail). The app also has a separate Ledger route for ledger views where linked from the UI.
Calendar	Facility calendar.
Manager Overlock	Overlock workflows for managers.
Contracts	Leases/contracts list, creation, templates, signing test tools.
Units	Unit list and Map editor for layout and units.
Reports	Financial and other reporting (including consolidated views where configured).
Yield Mgmt	Pricing / yield management.
Insurance	Insurance enrollment and claims (where enabled).
Access Codes	Gate/access code management (facility may be chosen when you open it).
AI Assistant	In-app assistant for help with SFC tasks.
Settings	Account, facility options, permissions, notifications, appearance, onboarding tab.

The **SFC** logo at the top of the sidebar returns you to the **Dashboard**.

Facility switcher

- Use the **facility switcher** in the app bar to choose which facility's data you are viewing, or an **"All facilities"** style context where supported.
- If you were added as a **team member** (not the owner), the switcher indicates **Team member** for clarity.

Subscription and access

- **Trials and subscriptions** are enforced in the app. If your trial expires or billing blocks access, the app may redirect you to **Billing & Payments** until resolved.
- A **subscription warning** may appear at the top of the shell; some navigation can be limited until billing is in good standing.

Global search (Dashboard)

- On the **Dashboard**, the search field searches across entities (tenants, units, etc., per your account's data) with short debounce as you type.
- Results let you jump to relevant records.

Syncing facility counts (operators)

- The Dashboard can offer an action to **recompute facility stats** (occupancy-style counts). Use it if cards or dashboard numbers look out of date; wait for the confirmation snackbar.

Report a Bug

- The sidebar footer includes **Report a Bug** to send feedback/issues.

4. Facilities

- **Facilities** lists sites you can access.
- **Create facility** runs a **wizard** to capture facility details.

- You can edit facility information from facility management flows (including links from delinquency and other screens where **Edit facility** appears).
-

5. Tenants (customers)

- **Tenants** opens the main **client list**: search, filters, and actions depend on your **permissions**.
 - From a tenant row, open **Tenant detail** for full profile, units, payments, documents, and communication history as your role allows.
 - **Add tenant** uses the tenant creation flow.
 - **Import CSV** runs a dedicated **CSV import wizard** for bulk onboarding.
 - **Delinquency** badges and grace behavior can reflect **facility billing settings** (e.g. grace days).
-

6. Units and map

Under **Units** in the sidebar:

- **Unit list** — create, edit, and open **unit detail**; manage status and linkage to tenants as the product allows.
 - **Map editor** — visual map of the facility layout and units.
-

7. Contracts and leases

- **Contracts** — list agreements, open **contract detail**, and create new contracts.
- **Contract templates** — manage reusable templates; create and edit template content.
- **Lease templates** — separate template area where the app routes lease-specific templates.
- **Signing test** — internal route for testing signing without a live tenant campaign.

Tenants sign via a **public contract signing** URL with a **token** (see Section 11).

8. Settings (account and facility)

Open **Settings** from the sidebar. The screen has two top tabs:

Settings tab

- **Account**
 - **Profile** — edit profile (email shown on the tile).
 - **Billing & Payments** — goes to the combined **subscription / Stripe / accounting** area (same as subscription management).
 - **Two-Factor Authentication** — toggle 2FA on or off (follow prompts; disabling may require identity verification depending on policy).
- **Facility** (many items ask you to **pick a facility** if you have more than one)
 - **Permissions** — user permissions for the facility.
 - **Notifications** — automated messages and reminders (per facility).
 - **Website setup** — one **public marketing / rentals website** per facility.
 - **Email opt-outs** — subscribers who opted out; you can allow mail again per policy.
 - **SMS opt-outs** — tenants who texted **STOP** and related block list.
 - **Texting** — when the feature is enabled for your environment: dedicated number and **A2P** (carrier compliance) setup for SMS.
- **General**
 - **Appearance** — theme / display preferences.
 - Legal links may open the marketing site (privacy, terms, etc.).

Onboarding tab

- Checklist-style help for new accounts (content is maintained in-app).
-

9. Billing, payments, and money

Billing & Payments screen (tabs)

Accessible from **Settings** → **Billing & Payments** (and subscription redirects):

1. **Your Subscription** — SFC platform subscription, trials, plan changes.
2. **Payment Processing** — **Stripe Connect** onboarding and status for taking tenant card payments **per facility** (uses the **active facility** when a specific facility is required).
3. **Accounting** — QuickBooks-related integration entry points where configured.

Payments (sidebar)

- Record and track **payments**, open **payment detail**, **create payment**, and **reconciliation** where your role allows.

Invoices, deposits, liens, recurring charges

- Routes exist for **invoices**, **deposits**, **liens**, **recurring charges**, **autopay activity**, **transfers**, and **payment links** management — use the navigation or in-app links from Billing/Payments and tenant contexts to reach them.
-

10. Operations: delinquency, messaging, access, retail

Delinquency

Delinquency is a single screen with **tabs**:

- **Overview** — summary of late situation for the selected facility.
- **Past Due** — accounts past due (ties into payment/tenant data).
- **Reminders** — reminder management (sidebar also treats **Reminders** routes as part of this area for highlighting).
- **Global DNR System** — Do Not Rent list at the configured scope.

Facility selection aligns with the **active facility** when possible so it stays consistent with the Dashboard.

Messaging

Messaging is **facility-specific**. Tabs include:

- **Employee Chat** — internal team conversations; **unread count** can show on the sidebar **Messaging** item.
- **Bulk Messaging**
- **Email**
- **SMS** — requires texting to be set up where applicable.
- **Message History** — filterable history of tenant-related messages.

There is also a dedicated **SMS conversations** route for threaded SMS views when you navigate there from links or bookmarks.

Access codes

Access Codes opens gate/access management; the app may prompt for **facility selection** if you have multiple sites.

Retail (POS)

Retail opens **POS** with **facility selection** when needed. **Inventory** and **retail sales history** are reachable from POS-related navigation inside those screens.

11. Public and renter-facing flows (no SFC login)

These URLs are meant for **tenants or prospects**, not for staff daily use:

Route pattern (conceptual)	Typical use
Tenant portal	Renters sign in or verify access to a limited portal (feature-flagged in some environments).
Contract sign (/contracts/sign?token=...)	Electronic signature of a lease or addendum using a secure token.
Public payment (/pay)	Pay rent or fees via a shared link.
Public rental / move-in	Online rental or move-in from the facility's public website flow.
Public facility / map	Marketing and unit availability on the public site.

Staff usually **copy these links** from contract, payment, or website-setup workflows rather than typing paths manually.

12. Automation, integrations, and advanced areas

From routes wired in the app (often linked from Settings, Billing, or facility tools):

- **API keys** and **Webhooks** — integrations for external systems.
 - **Escalation workflows** and **Conditional rules** — automation for collections and operations.
 - **Email sequences** and **Report scheduling** — scheduled communications and reports.
 - **Email / SMS templates** and **Communication analytics** — template libraries and performance views.
 - **Stripe Connect** — dedicated onboarding screen when linked from billing.
 - **Data integrity** — tools to detect and fix inconsistent records (admin-style use).
 - **Coupons, Yield management, Document center / attachments, Contact logs, Audit logs, Exports, Move-in wizard, Move-out, DNR list screen, Online rentals management** — all exist as first-class routes; open them from the UI entry points your administrator exposes (some depend on **permissions** or **feature flags**).
-

13. Permissions and feature flags

- Your **role** may hide actions (e.g. messaging, payments, or facility settings). If something is missing, ask an **owner** to update **Permissions** under **Settings**.
 - Some features (e.g. **Tenant portal, Texting onboarding**) can be toggled off for the whole platform — you would see an **“unavailable”** message rather than the screen.
-

14. Language and platform

- **Language** can be changed where the app exposes a **language selector** (e.g. on the Dashboard per implementation).
 - SFC targets **web** and other Flutter targets; behavior is richest on **web** for operator workflows.
-

15. Getting help

- Use **AI Assistant** in the sidebar for guided help inside the product.
 - Use **Report a Bug** for defects.
 - For account and billing issues, use **Billing & Payments** and your organization’s support channel.
-

This manual reflects the application structure as of the documentation date. Labels and exact menu positions may change slightly in new releases; the sidebar and Settings remain the primary map of the product.
